#350 Crete Crusher

Crete Crusher is an extremely effective concrete remover; it easily dissolves hardened cement, concrete, mortar and grout. Crete Crusher is safe on most surfaces including aluminum, chrome, glass, rubber and plastics. It works on limestone, concrete residues and concrete floors (Spot test before using.)

Application:

Using a sprayer, apply Crete Crusher onto dry concrete and wait 15 minutes or until concrete has turned to a paste. If a paste has not formed, then re-apply (this may occur with heavy buildup or older concrete). Rinse with a pressure washer and scrub with a brush for tougher buildup. Crete Crusher works best on dry surfaces in shaded areas so the gel solution can penetrate the tough buildup.

Benefits:

- * **Easy application**
- * **Readily biodegradable.**
- * **Safe on aluminum, glass, rubber or painted surfaces.**

TYPICAL PROPERTIES

Specific Gravity	1.104
pH	2-3
