

Schaeffer Earns ISO 9002 Registration

Schaeffer Manufacturing Co., a producer of top-quality lubricants, greases, fuel additives, surfactants and related products, has achieved ISO 9002 registration. The status is granted by Perry Johnson Registrars to manufacturers who pass a rigorous multi-part operational audit.

"Schaeffer is a growing company and we wanted to focus on our customers' quality needs," noted Jill Herrmann, the company's ISO Manager. She continued, "Seeking ISO registration helped us zero in on our quality-assurance process from the raw materials through customer use and feedback. It was a good test of all our systems and clarification of quality requirements. We're all proud of this accomplishment!"

The implementation and registration process took 18 months for Schaeffer. The 161 year old St. Louis, Missouri, family-owned business is the oldest oil and grease manufacturer in the country. Currently, major customers include industrial, agricultural, mining and commercial companies. Schaeffer's newest product called SoyShield, a soybean-based bio-diesel fuel additive, is now being widely tested in agricultural and government applications.
